

Specification of Sunshades

Because our apartment complex must maintain its uniform appearance, as sun protection, only screens and drop-down screens on the outside of the complex be placed.

The aluminum casing of the screens and drop-down screens (frames) must be in the RAL color 7016 (anthracite gray) or 9023 (pearl dark gray) enamelled.

The drop-down screens must be equal to one of the two currently used types.

-Type 1 has horizontal beams on both sides when the screen is unfolded of the cloth.

-Type 2 has no horizontal beams when the screen is unfolded. For both types, they must be "storm-proof".

Only if the structural construction does not allow this is a different construction permitted. If this applies to you, please contact us first before placement board for consultation.

Screens:

For the screens, the color of the sergé cloth 71701 is pearl white, with the dark side should be on the outside. The light side is visible from the house as the screens are down.

(various companies use the color code 116108 for the screens)

Drop-down awnings:

Color of the cloth is Dikson 8203 (anthracite gray)

Several screens and drop-down screens have already been installed in our complex. We advise you to request a quote from multiple parties because there is quite a large price difference between the various providers.
